Dear Mr. [REDACTED]:

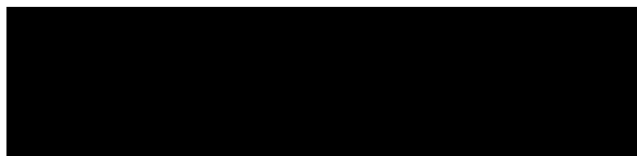

Replying to your letter of 21 August 1953, please be advised that it is the desire of the users that the specifications be interpreted to call for Penthouse grounding to meet the following standards:

- a. That horizontal bus be #0000 gauge aluminum.
- b. That all main conductors (i.e., those which follow the wall and roof lines) be #6 gauge aluminum.
- c. That all flexible conductors (i.e., connecting items of equipment, duct work, aluminum sheathing, etc., to each other or to the main conductors) be a minimum of #10 gauge aluminum.

Your understanding with respect to requirement for #0000 copper wire is correct in all respects.

Unless you notify us to the contrary, we will assume that the above interpretation will entail no contract adjustment.

Very truly yours,

25X1A9a
